Pred. No. 1s the number of results predicted by chance to have a core greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. /SIDS2/gcgdxta/geneseq/geneseqp-emb1/AA2000.DAT:*/SIDS2/gcgdxta/geneseq/geneseag-emb1/AA2001.DAT:*/SIDS2/gcgdata/geneseq/geneseag-emb1/AA2002.DAT:*

Rosen Ch. Barash SC, Ruben SM; (HUMA-) HUMAN GENOME SCI INC.

Nucleic acid molecules encoding human secreted extracellular matrix process, used in preventing, treating or imblicating a disorder, e.g. Alzheimer, and Parkhison's diseases and cancers -

Claim 11; SEQ ID No 276; 577pp; English.

The invention with the to included an include an extending the present of which will not be a polymerical child and provides are wested to present region. The proposes (989). The proposes of arrest, tachycardia and angina), infections caused by bacteria, viruses and fund; and coular discretes (e.g. corneal infections). Other uses include wound healing, maintenance of organs before transplantation.

ineigh excited onks. Litture that were synthesised by the oligo-cappia
method. The priests making the production of the full length onks assily
without any special methods. The present eceptons is a polymetride encoded by a full length human onks of the invention. Only the work when the sequence data for this patent of all one forms part of the printed specification, but was obtained in On-RMA formst directly from 1800.

So that we need the expressing full length close is so that we need the expressing of the two states and not closely see sequence of 2° -m all v-dead of the constituent have been determined. Primers for sprintesising the full length column sendil for clustering the shortcom of the procedule considerable the const. The full length closes were obtained by construction of full.
